

## Lab 10 — Skeletal Muscles & Peripheral Nerves of the Cat

*For the listed muscles and nerves, be able to identify them on the cat.*

### Activity 12.8: Trunk & Neck Muscles

Sternomastoid  
Sternohyoid  
Digastric  
Masseter  
Pectoralis major  
Pectoralis minor  
Rectus abdominis  
External oblique  
Internal oblique\*  
Transverse abdominis\*  
Trapezius group (3 muscles)  
Levator scapulae ventralis  
Deltoid group  
Latissimus dorsi  
Serratus ventralis (S. anterior in humans)  
Scalenes  
Splenius  
Rhomboides (Rhomboid group)  
Supraspinatus  
Infraspinatus

### Activity 12.9: Forelimb

Triceps brachii  
Brachioradialis  
Extensor carpi radialis longus  
Extensor digitorum communis  
Biceps brachii  
Pronator teres  
Flexor carpi radialis  
Palmaris longus  
Flexor carpi ulnaris

### Activity 15.4: Nerves of the Forelimb (*look for these while dissecting forelimb muscles*)

Musculocutaneous nerve  
Radial nerve  
Median nerve  
Ulnar nerve

### Activity 12.10: Hindlimb Muscles

Sartorius  
Tensor fasciae latae  
Gluteus medius  
Gluteus maximus  
Biceps femoris  
Semitendinosus  
Semimembranosus  
Gastrocnemius  
Soleus  
Fibularis  
Extensor digitorum longus  
Tibialis anterior  
Rectus femoris  
Vastus medialis  
Vastus lateralis  
Gracilis  
Adductors (femoris & longus)  
Flexor digitorum longus

### Activity 15.5: Nerves of the Hindlimb (*look for these while dissecting hindlimb muscles*)

Sciatic nerve  
Tibial nerve  
Common fibular nerve

\* = not shown on human models (but is present in humans)
